Subject: Flexviewer and Widget Things to work on.
Date: Monday, April 22, 2013 2:55:27 PM

Eric.

I have made the current West Fertilizer the version 3.0. In turn this has fixed:

1. The Legends and Layers bug of being able to turn layers on and off consistently.
2. The Edit capabilities are back. I also fixed the config file so it works in the 3.1 version.

I also added the fade base map switcher to both 3.0 and 3.1 ER viewers.

Can you get Brett to work on the following:

Updates for the Viewer – 3.0 West Viewer -

<http://gis.eparesponsemanager.net/r6/WestFertilizer/>

-

1. Implement the extent grabber widget on the current ER Flexviewer – It is version 3.0
2. Move over any of the missing widgets from the 3.1 Viewer
 - a. EPA Facilities Search
 - b. Buffer Tool
 - c. Add Layer from Web.

Updates for the Viewer – 3.1 West Viewer -

http://gis.eparesponsemanager.net/r6/WestFertilizer_3_1/

1. Implement the fix he did to the Extent grabber widget on this viewer.
- 2.

PDO Viewer – Current Version

Bugs noticed:

1. Data Layers and Legend widget needs to be checked out – after you check a layer on then turn it off the ability to check another layer on and off goes away. Check out the current Flexviewer for the response specifically on the VIPER

Additional Things to look at.

1. Update SOP for Flexviewer 3.0. I see something's that are different in the config file and the widgets need to be updated.
2. Also something's I noticed as we advance in versions icons and hover names of tools change. I think this is something for the users we should try to keep consistent.

Also as these things get updated Raj and I are also working in the current ER Config file and we will

need to coordinate when someone is in it so changes don't get written over.

Thanks.
